

STRAKON

2D/3D/BIM
by DICAD

The worlds best CAD / BIM software for reinforced concrete structures design

What is STRAKON

The 2D/3D/BIM/CAD software for civil engineering, building construction and precast construction. STRAKON is a 2D/3D/BIM/CAD software for structural design. The focus is on formwork and reinforcement design.

Raise your value

STRAKON enables you more efficient, accurate and faster design of your reinforced concrete projects. Easy to use software with excellent support and fair price.

EASY TO LEARN

We assist you in learning. Our training will help you start on your own.

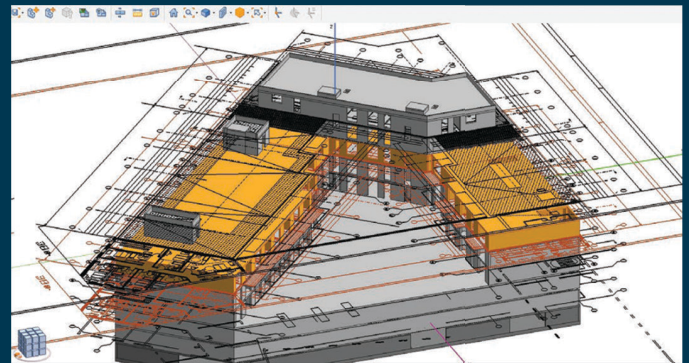

EFFICIENT AND FAST

STRAKON is proven to be more efficient and allows faster workflow.

2D/3D/BIM/CAD

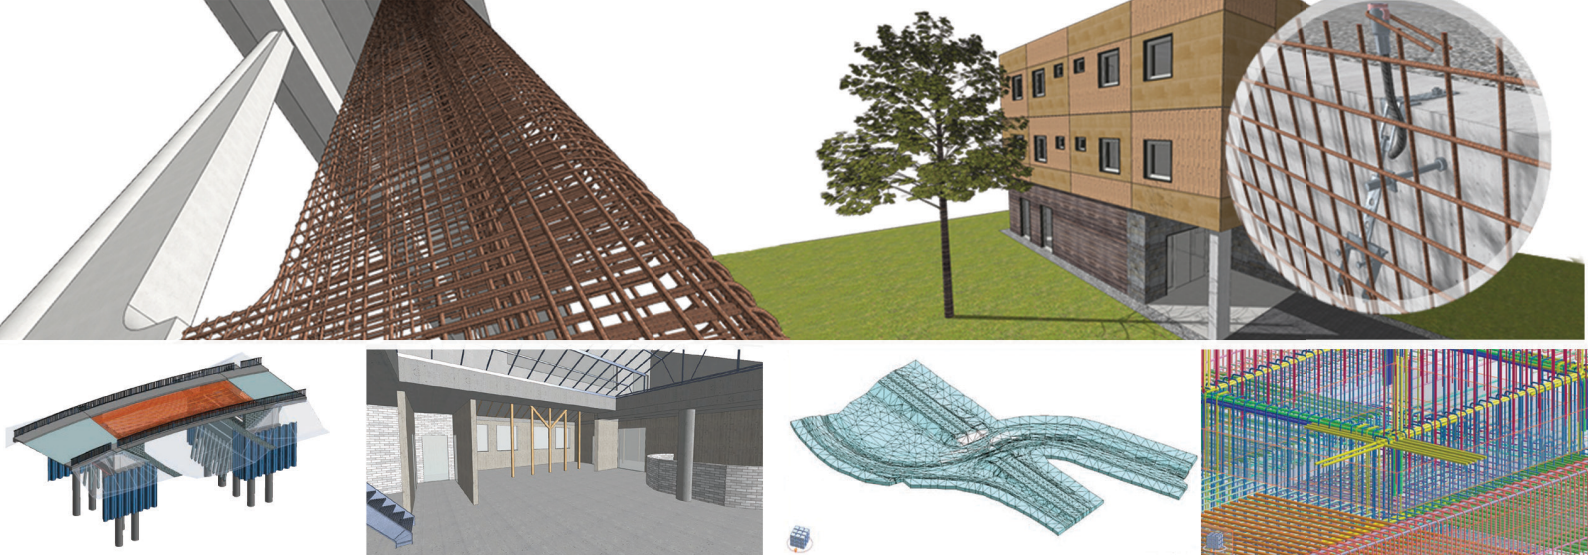

STRAKON offers you to work in 2D and 3D. It is a CAD and BIM software at once.

WHY CUSTOMERS CHOOSE US

New customers highlight German quality, simplicity of use and great 3D reinforcement design, with great BIM compatibility. Customers are also satisfied with great support and education.

VISIT US AT: www.adriabim.com

Does your current way of working take up too much of your time?
 Are you afraid of switching to BIM software?
 Would you like to design both in 2D and 3D faster and easier?

Excellent support, education and fair pricing!

STRAKON is becoming quite popular in Europe due to its excellent education, support and low prices. An even more important fact than the price is the ease of use of the software and high efficiency!

German quality

STRAKON ranks first in Germany and the surrounding countries. The program is designed in a practical and high-quality way to provide you the best design experience!

BIM compatibility

STRAKON is compatible with other BIM software with advanced exchange of IFC files. You can export or import all types of IFC files. STRAKON also allows you to directly edit received IFC files.

Several design approaches - 2D/3D/BIM/CAD

STRAKON enables work in different perspectives and views. You can still work on your reinforcement and structural drawings in a simple 2D environment or in the most advanced way with the help of the BIM - Cube Reinforcement.

Suitable for all types of concrete structures

STRAKON is useful for all types of reinforced concrete structures from prefabricated halls, residential buildings to bridges.

Fast and efficient work

Increase your work speed by up to 80% and reduce the number of errors and the amount of duplicate work. Save your precious time!

Easy and fast migration to STRAKON

Our engineers will stand by your side when you are new to STRAKON. With software purchase, you will receive a free training for the immediate use of the STRAKON program.

Advanced tools for drawing and modeling

In addition to the classic 2D CAD commands, STRAKON also provides you with modern, intuitive commands for more advanced but much easier design.
